PROFESSIONAL SUMMARY

Computer Science student specializing in Java backend development with Spring Boot and microservices architecture. Experienced in building RESTful APIs, integrating relational databases, implementing authentication and authorization, and containerizing applications with Docker. Focused on developing secure, maintainable, and scalable backend systems through hands-on projects.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, C++

Backend Frameworks: Spring Boot, Spring Security, Spring AI, Spring Data JPA

Microservices & Cloud: Spring Cloud, Netflix Eureka, Spring Cloud Config, API Gateway, RESTful APIs

Databases: MySQL, PostgreSQL, H2, DBMS, SQL

Messaging & Monitoring: Apache Kafka, Spring Boot Actuator

Security: JWT Authentication, Role-Based Access Control

Developer Tools: Git, GitHub, Maven, Postman, Docker

Core Concepts: Object-Oriented Programming (OOP), Microservices Architecture, Database Design

PROJECTS

SkillCart – *AI-Powered Job Discovery & Professional Networking Platform | GitHub*

Developed backend services using **Java, Spring Boot, and Microservices Architecture** for authentication, resume management, social networking, and job discovery.

Implemented inter-service communication using **REST APIs and REST clients** to enable interaction between application services.

Developed authentication and authorization functionality to manage user access and protect application resources.

Containerized backend services using **Docker** and deployed the application on **Render**.

Tested and validated REST API endpoints using **Postman**.

Collaborated with frontend and AI team members to integrate backend APIs with application features.

CoachAssist -*Coaching Management System | GitHub*

Developed a microservices-based backend using Java and Spring Boot with dedicated services for Student, Parent, Coaching, and Admin management.

Implemented REST API communication and **configured** an API Gateway to route client requests to the appropriate backend services.

Configured Spring Cloud Config Server for centralized application configuration and Netflix Eureka for service registration and discovery.

Implemented JWT-based authentication and role-based authorization to secure endpoints and control access to student records, attendance, marks, and notices.

Containerized backend services using Docker and worked on deployment using Render.

Tested API workflows using Postman, including authentication, coaching approval, attendance management, and academic record operations.

EDUCATION

- Bachelor of Computer Applications (BCA)

  Sahyog College | 2024 – 2027

- Higher Secondary Education (Science)
  SHVOV Junior College | 2016 – 2024
