AYUSH SHAH

BACKEND DEVELOPER

9309566952 | PORTFOLIO | GitHub | ayushah810@yahoo.com

ABOUT ME

Computer Science student specializing in Java backend development with Spring Boot and microservices architecture. Experienced in building RESTful APIs, integrating relational databases, implementing authentication and authorization, and containerizing applications with Docker. Focused on developing secure, maintainable, and scalable backend systems through hands-on projects.

SKILLS

Programming Languages: Java, JavaScript, C++ Backend Frameworks: Spring Boot, Spring AI, Spring Data JPA
Microservices & Cloud: Spring Cloud, Netflix Eureka, Spring Cloud Config, API Gateway, RESTful APIs
Databases: MySQL, PostgreSQL, SQL
Messaging & Monitoring: Apache Kafka, Spring Boot Actuator
Security: Spring Security, JWT Authentication, Role-Based Access Control
Developer Tools: Git, GitHub, Maven, Postman, Docker
Core Concepts: Object-Oriented Programming (OOP), Microservices Architecture, Database Design

PROJECTS

SkillCart – *AI-Powered Job Discovery & Professional Networking Platform* GitHub

- Developed backend services using Java, Spring Boot, and Microservices Architecture for authentication, resume management, social networking, and job discovery.
- Implemented email OTP verification using the Brevo Email API to support secure user registration and email verification.
- Developed authentication and authorization mechanisms to control user access and protect application resources.
- Containerized backend microservices using Docker and deployed backend services on Render.
- Developed and tested RESTful APIs using Postman to validate HTTP requests, responses, and endpoint functionality.
- Collaborated with frontend and AI developers to integrate backend REST APIs with application features and AI-powered services.

CoachAssist - *Coaching Management System* GitHub

- Developed a microservices-based coaching management system with dedicated services for Admin, Coaching, Student, and Parent modules.
- Implemented an API Gateway for centralized request routing and communication between clients and backend services.
- Configured Spring Cloud Config Server for centralized configuration management and Netflix Eureka for service registration and discovery.
- Implemented JWT-based authentication and role-based authorization to secure REST APIs and control access to student records, attendance, marks, and notices.
- Containerized backend services using Docker and worked on deployment using Render.
- Tested REST API workflows using Postman, including authentication, coaching approval, attendance management, and academic record operations.

EDUCATION

BACHELOR OF COMPUTER APPLICATIONS (BCA)
SAHYOG COLLEGE | 2024 – 2027
